non-A, non-B hepatitis virus; NANBHV; PCR; amplification polymerase chain reaction; vaccine; antibody; ss. hepatitis virus strain HC-J4 genome Location/Qualifiers 342. .1880 BP AAQ24467 standard; DNA; 1880 (first entry) Non-A. non-B hepatitis virus. 09-NOV-1992 NAMB

This sequence is the genome of the non-A, non-B hepatitis virus (NANBHV) strain HC-J4. This sequence was derived by amplification by polymerase chain reaction. The nucleotide sequences derived from this amplification can be used to detect NANBHY infection which could not be detected by conventional methods. The detection kits allow highly specific and sensitive detection at an early phase of infection. The polypeptide product of this coding sequence can be used for the manufacture of vaccines and immunological pharmaceuticals and also to produce antibodies Recombinant cDNA of NAMBH virus strain HC-J5 and corresp. peptides -useful for diagnosis and in vaccines and immunological pharmaceuticals. Sequence 1880 BP; 333 A; 593 C; 556 G; 398 T; 0 U; 0 Other; Disclosure; Page 11; 42pp; English. а НС-J4 91EP-00310297 90JP-00304405 /*tag= ¿ /label= I (IMMO) IMMUNO JAPAN INC. - Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of
collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDGP Drosophila
melanogaster BAC library was prepared by Kazutcyo Oscogawa and
Aaron Mammoser in Pieter de Jong's laboratory in the Department of
cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
NY. The library is named RPCI-98 and was constructed by partial
BCORI digestion of Drosophila DNA provided by the BDGP from the
isogenic strain y2; cn bw sp, the same strain used for the BDGP's
Pl and BST libraries. A more detailed description of the library
and how to order individual BAC clones, the entire library, or
filters for hybridization from the BACPAC Resource Center can be
found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CNS0091P

Anote="Vector: pBluescript II SK-; Site_I: BCORI; Site_2: XhOI; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (actate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. POlyA mRNA was purified from each sample, pooled and CDNA synthesized. The CDNA was directionally cloned into lambda ZAP II (Stratagene) in the ECORI (5') and XhOI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with EXASsist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /mol_type="mRNA"

Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogater BAC library (Dros BAC) was made by Alain Billaud at CBPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton pBelobacieve Payan. It has been constructed in the vector

/clome lib="Cabernet Sauvignon Leaf - CA12EI"
/clome lib="Cabernet Sauvignon Leaf. Sfil; Site_2:
Sfil; CA12EI is a cDNA library of Cabernet Sauvignon
leaves. The leaves were collected on July 25, 2001, in
Napa Valley, California, and represent leaves in
mid-season development. These leaves were verified to be
infected with the bacterial pathogen, Xylella fastidiosa,
based on a diagnostic assay using PCR and Xylella-specific
primer pairs. The plants were asymptomatic at the time of
collection, but later developed symptoms. CDNAs were made
by oligo-dT priming and directionally cloned. 5'and 3'
adaptors were used in cloning as follows:
5'-AAGCAGTGGTATCAACGCAGTGGCCATTACGGCGGG-3' and
     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CA816001

/note="Vector: pallabescript II SK-; Site_1: BCORI; Site_2:
XhOI; Stress condition II library, constructed by John
Davies and Jeffrey McDermott, combines cDNAs from CC-1690
cells grown to mid-log phase in TAP (NH4+ - containing)
and shifted to TAP - NO3- (24hrs); H2 production
conditions (0, 12hr, 24hr); H2 production
conditions (0, 12hr, 24hr); TAP + H2O2 (1, 12, 24 hr); TAP +
sorbitol (1, 2, 6, 24 hr); TAP + Cd (1, 2, 6, 24 hr)
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized. The cDNA was directionally cloned into lambda
Zap II (Stratagene) in the BCORI (5) and XhORI (3')
sites. pBluescript II SK- plasmids were excised from the
lambda ZAP clones by superinfection with ExAssist
(Stratagene) phage. The library was normalized using
method 4 described in Bonaldo et al., (1996) Genome
Research 6: 791-806."

                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                               US-08-927-597-49

Sequence 49, Application US/08927597

Sequence 49, Application US/08927597

Patent No. 6445503

GRNERAL INFORMATION:
APPLICANT: BOSMAN, FONS
APPLICANT: BOSMAN, FONS
APPLICANT: BUSMAN, FONS
TITLE OF INVENTION: PURIFIED HEPATITIS C VIRUS ENVELOPE
TITLE OF INVENTION: PROTEINS POR DIAGNOSTIC AND THERAPEUTIC USE
NUMBER OF SEQUENCES: 111
CORRESPONDENCE ADDRESS:
ADDRESSEE: NIXON & VANDERHYE P.C.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
